Homework

Story: The Thanksgiving Recipe Collection form is looking great, but it's missing a few important features that would make it even more helpful for users. Your task is to take it to the next level by adding a special feature.

Your Task: Imagine you're helping users find their favorite recipes faster. Add a drop down **selection** that allows them to choose their recipe's **difficulty level** (Easy, Medium, or Hard). This will help people know how challenging the recipe is before they start cooking.

Once you've added the drop down, test how it works and think about how it improves the user experience.

Question: Why do you think adding the difficulty level to the form is useful? Would you add any other features to help users decide which recipe to choose?
