

Program: Coding
Grade: 7 & 8
Module: Web Development
Lesson: 11

Homework

Imagine you are working on a special website called “Eco Explorers.” Your mission today is to create the first section of the website. It’s all about encouraging people to make small changes to help the environment.

Your Task: Start by building the foundation of the website in HTML. Create a section called “Eco-Friendly Habits” where you will share tips like recycling and conserving water. You will also use basic CSS to make it look nice. Think of it as setting up the structure of the page—like a skeleton—so it’s clear and easy to read.

Question: What HTML elements did you use, and why do you think they are important for the structure of your website?
