

**Program:** Coding

**Grade:** 7 & 8

**Module:** Web Development

**Lesson:** 20

### Homework

#### **Story:**

Now that you've completed the basic structure of the **Contact Us** form, it's time to make it more user-friendly and interactive. Your task is to improve the form by adding hover effects and error handling.

#### **Your Task:**

##### **Add Hover Effects**

Make the form more interactive by adding a hover effect to the **Submit** button. When users hover over the button, it should change color and slightly grow in size to indicate it's clickable.

##### **Error Handling**

Sometimes users forget to fill out fields. Add error messages that will appear when required fields (like **Name**, **Email**, or **Phone Number**) are left empty. These messages should be displayed in red and placed below the field.

##### **Test the Form**

Test the form by filling out each field and submitting it. Make sure the hover effects and error messages work as expected.

##### **Reflection**

How did you ensure the form was both functional and visually appealing? What improvements would you suggest for future updates?
