

Program: Coding

Grade: 7 & 8

Module: Web Development

Lesson: 19

Homework

Story:

You are the lead developer for a new business website, and today your task is to create a **Contact Us** form that customers can use to get in touch. It's your first day working on the project, and you need to make sure the basic structure of the form is ready!

Your Task:

Add New Fields

The current form is missing a way for users to select the **Department** they want to contact. Add a drop down menu with options like "Sales," "Technical Support," and "Billing." Ensure the drop down menu fits with the rest of the form.

Form Validation

Write down what type of input validation is required for the name and email fields to ensure users fill them out correctly.

Basic Styling

Update the styles for the new drop down menu so that it matches the rest of the form. Ensure the font size and padding are consistent.

Reflection

What was the most challenging part of adding the new fields? Did you face any issues with the layout?
