Grade: 7 & 8

Module: Web Development

Lesson: 22

Homework

Story:

The team is loving your design! Now, it's time to make the product sections shine even more. Users need to easily browse the iPhones and accessories, and your job is to improve the functionality and make the page more engaging.

Your Task:

Add a Product Carousel

Customers want to see more products without scrolling too much. Add a **carousel feature** to the iPhone and Accessories sections so users can swipe left and right to explore multiple products. Use arrows to let them navigate between items.

Enhance the Product Cards

Add a **zoom effect** to the product images in the iPhone and Accessories sections. When users hover over a product image, it should slightly zoom in, making the product feel closer and more interactive.

Introduce Ratings

Users want to see what others think of these products! Add a **star rating** below each product's price to show how well each iPhone and accessory is rated. Style the stars to match the Apple theme.
