**Program:** Coding
Grade: 7 & 8
Module: Web Development
Lesson: 18

Homework

Story:
After setting up the basic structure of the **98th Percentile Aquarium Gallery**, it's time to make the website truly shine! Visitors love interactivity, and your task today is to add some animations and effects to bring the gallery to life.

Your Task:

Add Hover Effects
Make the **"Featured Aquatic Creatures"** section more engaging. Add a hover effect so that when visitors move their mouse over the images, they enlarge or change color slightly.

Brighten the Background
To ensure the text on the website is easy to read, adjust the brightness or contrast of the background video. This will make everything look sharp and clear.

Enhance the Footer
Lastly, make the footer interactive! When users hover over the social media icons, they should grow slightly to grab attention. Add this hover effect to create a polished, professional feel.
