Program: Coding
Grade: 7 & 8
Module: Web Development
Lesson: 23

Homework

Story:
Your changes have made a big impact, and now the Apple team wants you to help users compare iPhone models and stay connected with the brand. It's your final day working on this project, and you need to make the comparison section and footer more useful and engaging.

Your Task:

Filter for iPhone Models
Users need to compare iPhones based on their storage size. Add a **filter** feature above the comparison section that lets users select storage options (128GB, 256GB, 512GB). Once they select an option, only iPhones with that storage size should appear.

Improve the Comparison Cards
Help users easily compare iPhone features! Add a **performance bar** next to the battery life, camera, and display features. For example, use a bar or icon to visually show which model has better battery life or display quality.

Add a Newsletter Subscription
Keep Apple customers connected! Add a **newsletter subscription box** to the footer. Users should be able to enter their email to subscribe for updates. Style the form to blend with the sleek design of the website, and include a clear call-to-action button.
